

Identification

Properties identified

through bulk tank milk

testing.

Casing

Someone from the

M. bovis Programme

will call you to discuss

your farm operation

and risk. You will be

given information on

what to expect and

how to mitigate

your risk.

Bulk Tank Milk – Indicative process for Farmers

1a

Round 1 testing

All cattle that contributed

to the bulk tank milk

detect sample are

tested.

Management groups

of more than 40 cattle

If Round 1 is negative,

the NOD can be

revoked in most cases and no further farm testing is required for

this risk event. If *M. bovis* is detected on ELISA on round 1 testing, further testing

will be required.

Notice of

Direction (NOD)

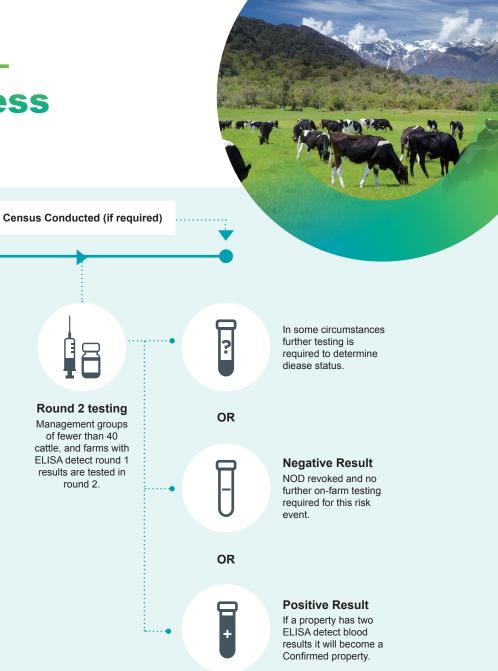

served

Control on property

such as restricting

movement of cattle off

property.

Census Review

If census review reveals trace cattle on the property, further testing will be necessary under a NOD (if controls have been revoked then a new NOD will be issued).
